

GT 4.2.0 Migrating Guide for GSI C

Table of Contents

1. Migrating GSI from GT4.0	1
2. Migrating from GT3	1
3. Migrating GSI from GT2	1

<titleabbrev>Migrating Guide</titleabbrev>

The following provides available information about migrating from previous versions of the Globus Toolkit.

1. Migrating GSI from GT4.0

Nothing should have to be done when migrating from GT4.0.

2. Migrating from GT3

2.1. GAA and authorization callout configuration

GT 3 introduced the notion of authorization callouts. These callouts are configured via configuration files discovered as described in [Environment variable interface](#). When installing GT4 on a system on which these configuration files already exist, it is important to either update them for GT4 (since these files contain version specific informations) or to remove them from any of the locations in which GT4 is looking for these configuration files.

Note

If you plan to use GT3 and GT4 on the same system, you will need to short circuit the search algorithm for these configuration files by specifying the correct location for these files via the `GSI_AUTHZ_CONF` and `GSI_GAA_CONF` environment variables.

3. Migrating GSI from GT2

Nothing should have to be done when migrating from GT2.
